

Learn At Home Activity

Lungs

We are talking about lungs in class.

The class did an experiment on lung disease by breathing through a straw. This experiment lets the children experience how it feels to have lung disease and how much harder it is to take a breath.

We then discussed how to keep their lungs healthy.

We have attached an activity to assist you and your child to do this experiment at home.

Please complete the learn at home activity sheet and return it.
